Database with VIEW and INDEX

AIM:

To create **VIEW and INDEX** on the given relation.

PROCEDURE:

Step 1: Select the database containing the movies table.

Step 2: Verify the records available in the movies table.

Step 3: Create a view named v1 containing the required columns from the movies table.

Step 4: Display the records stored in the created view.

Step 5: Insert a new record through the view and verify the inserted record.

Step 6: Delete a record through the view and verify the deletion.

Step 7: Create an index on the movies_name attribute of the movies table.

Step 8: Use the indexed column to retrieve the required movie record.

Step 9: Display the index information and verify that the index has been created successfully.

Step 10: Drop the created index after completing the operation.
