DDL Commands – CREATE, ALTER, DROP

AIM:

To Create, Alter, Drop, Rename, Truncate using Data Definition Language (DDL) statements.

Description:

Data Definition Language (DDL) statements are used to define the database structure or schema.

DDL Commands: Create, Alter, Drop, Rename, Truncate

PROCEDURE :

Step 1: Create a new database for storing movie details.

Step 2: Select the created database to perform the required operations.

Step 3: Create a table named Movies with the attributes M_id, Movie_Name, Male_Lead, Female_Lead, Director, and Music.

Step 4: Verify the structure of the created table.

Step 5: Insert the movie details into the Movies table.

Step 6: Display all the records in the Movies table to verify that the data has been inserted successfully.

Step 7: Alter the Movies table by adding a new attribute named Ott.

Step 8: Modify the data type/size of the Ott attribute as required.

Step 9: Rename the Movies table to Movie_Details.

Step 10: Verify that the table has been renamed successfully.

Step 11: Truncate the Movie_Details table to remove all records while retaining the table structure.

Step 12: Verify that all records have been deleted from the table.

Step 13: Drop the Movie_Details table from the database.

Step 14: Verify that the table has been removed successfully from the database.
