Query with Sub Query& Correlated Query

AIM:

To perform **Sub Query and Correlated Query** on the movies table.

PROCEDURE:

Step 1: Select the database containing the movies table.

Step 2: Verify the records available in the movies table.

Step 3: Write an inner query to retrieve a required value from the movies table.

Step 4: Use the inner query as a **subquery** within the outer query.

Step 5: Execute the subquery and observe the records returned by the outer query.

Step 6: Write a **correlated subquery** that uses values from the outer query.

Step 7: Execute the correlated query and observe the records satisfying the given condition.

Step 8: Verify and compare the results obtained from the subquery and correlated query
